

Kiosk Software

Software - that's really what you need to look at when shopping for an interactive kiosk. While Windows provides a robust operating system for well designed kiosks, it's our "TopLock" (Kiosk Operating System) software that sets us apart.

All CoolTouch kiosks come with this specially designed software which enables [remote monitoring and control](#) of all kiosks 24 hours a day to ensure their trouble-free operation and your peace of mind. Our software package consists of two modules:

1. NETWORK MANAGEMENT SYSTEM SOFTWARE monitors kiosk usage and collects on-line statistics. The main features are:

- Remote control and management of kiosk software and hardware
- 24/7 web/SMS/WAP kiosk status monitoring
- Remote kiosk and system restart
- Advanced time setting management
- User statistic collection
- Payment and revenue reports
- Advertisement management and reports
- Technical log reports
- Kiosk database access

2. PREINSTALLED KIOSK SOFTWARE (TopLock application) allows to configure and customise user interface and monitors kiosk status. It also allows to:

- Provide secure and controlled Internet/Intranet browsing
- Restricted Internet surfing or email access
- Collect payments for supplied services / info
- Manage payment tariffs at a touch of a button
- Manage banners and full screen advertisements
- Protect kiosk from system crashes and connection problems
